About

Molapo Eco Farm

Molapo Eco Farm is a community-based green enterprise established in 2024 by Reaipela Kgaje in Maruping Village, Kuruman, Northern Cape. Rooted in a vision of sustainability and local empowerment, the initiative was created to address pressing environmental and socio-economic challenges within the community. The enterprise focuses on sustainable agriculture, effective waste management, and environmental conservation, all guided by circular economy principles that promote the reuse and transformation of waste into valuable resources.

At the heart of Molapo Eco Farm's work is the innovative management of organic waste, particularly livestock manure, which is a common challenge in rural areas. Instead of allowing waste to accumulate and create sanitation and environmental issues, the farm converts it into nutrient-rich compost and other agricultural inputs. This process not only improves soil health and crop production but also contributes to cleaner, healthier living conditions.

Beyond environmental impact, Molapo Eco Farm plays a vital role in strengthening food security and creating economic opportunities. By producing organic fertilisers and supporting local agricultural activities, the enterprise helps community members grow their own food and generate income. Through skills development and community involvement, Molapo Eco Farm continues to build a model of sustainable rural development that benefits both people and the environment.

Our Vision

To become a leading rural green enterprise that transforms waste into valuable resources while promoting sustainability and community development.

Our Mission

To provide eco-friendly waste management and agricultural solutions that improve food security, empower communities, and support environmental conservation.

Our Services

Manure Removal Services:

We collect and remove livestock manure from kraals, improving sanitation and reducing environmental pollution in rural communities.

Compost Production:

We convert organic waste into nutrient-rich compost, supporting soil health and sustainable agriculture.

Crop Production:

We grow fresh, organic vegetables using natural compost, promoting food security and healthy living.

Environmental Clean-Up Services:

We conduct clean-up initiatives to improve environmental health and raise awareness of sustainable waste management.

Youth Employment & Skills Development:

We create job opportunities and provide practical skills training for local youth in agriculture and environmental work.

About the Owner

Reaipela Kgaje is a passionate young entrepreneur driven by a deep commitment to sustainability, innovation, and community development. With a strong vision to create lasting environmental impact, she founded Molapo Eco Farm as a response to the growing waste management challenges faced by rural communities. Her mission goes beyond simply addressing waste — she seeks to transform it into a valuable resource that can generate income, create employment opportunities, and promote environmental responsibility.

Through Molapo Eco Farm, Reaipela has positioned herself as a change-maker who believes in practical, community-driven solutions. Her work focuses on empowering local communities with the knowledge, tools, and systems needed to manage waste effectively while fostering economic growth. By turning everyday challenges into opportunities, she continues to inspire others to think sustainably and act responsibly for the benefit of future generations.

Why Choose Us

- Community-focused and locally rooted
- Eco-friendly and sustainable solutions
- Promotes food security
- Creates youth employment
- Uses natural farming methods
- Supports environmental conservation
